

CLEANING OF MARINEDECK® interior

From past experience we have found that all internal areas need to be coated with a sealer to reduce cleaning and maintenance. This is because it is not possible to wash the dirt off with a deck hose in internal areas. MARINEDECK® interior comes uncoated.. After the planks and/or tiles and/or marine strips are glued to the deck is ready for coating or to be prepared for coating. See coating at these installation instructions.

General Cleaning

MARINEDECK® interior does not absorb any liquids when coated and is therefore stain resistant and very easy to clean under normal conditions. Most types of general cleaners or detergents (non chemicals) can be used. Please contact your national distributor or STAZO marine equipment b.v., info@stazo.nl if there would be any question.

Directions

Mix a normal volume of non chemical cleansing agent with 10lt of fresh water in a bucket and wash the deck using a mop or soft to medium bristle broom. Leave on the deck for 10-15 minutes before removing the excess water with a mop, squeegee or dry cloth. Wipe off all the dissolved dirt while the deck is still wet. Increase the concentration of Cleaner as required. For more stubborn marks a non metal scourer may be used with undiluted cleansing agent to scrub the affected area. Avoid the use of too much water on the deck, as water may run between the deck and walls. Let the deck dry off completely before use. The frequency of cleaning depends on the amount of traffic and visible build up of dirt.

Commercial cleaning

For high traffic areas with an increased build up of dirt, mix cleansing agent (non chemicals) with fresh water. Follow the instructions at the pack being provided by the manufacturer. Increase the concentration as required. An electric scrubbing machine with a soft bristle should be used for large areas. The frequency of cleaning depends on the amount of traffic and visible build up of dirt. A regular cleaning schedule must be in place to maintain optimum appearance. We advise a weekly wash with cleaner and the use of a stain remover on a monthly basis or as required. Please contact your national distributor or STAZO marine equipment b.v., info@stazo.nl if there would be any question.

Cleaning of high traffic area's, coated (ferries and cruise ships)

on a frequent basis by an industrial non chemical cleansing agent. Carefully follow the instructions of the specific non chemical cleansing agent. Use a brush or a scrubbing machine to clean and a mop to remove excess water and dirt. Increase the concentration of cleaner if required. Use an electric scrubbing machine with a soft bristle for large area's. Please look at the bottom of this page for consumption, ratios and tools to be used.

Stubborn Marks:

The use of undiluted cleaner or stain remover with a non metal scourer should remove most stubborn marks. Chewing gum is probably the most difficult material to remove from the deck. We advise to ban the use of chewing gum on the vessel, but if this is not possible at least provide a litter somewhere to dispose of gum after use to minimize marking. To remove use a blunt edged scraper to remove most of the gum, being careful not to damage the coating. Then use undiluted non chemical cleaner or stain remover with a scourer to remove

the remaining residue. Turpentine may be used sparingly and only if rinsed with cleaner after use. Do not leave solvent on the deck as it may damage the coating. Please consult your MARINEDECK distributor for other more specific cleaners, if required.

Caution

Do not use solvents, abrasive cleaners or bleach to clean MARINEDECK®interior, unless advised by your distributor. If chemicals, solvents or oils are spilt on the deck, wash off immediately with cleaner as a precaution. Avoid the use of rubber or latex backed mats on the deck, as they may discolour the coating. Do not use the deck when wet as it may become slippery, remove excess water with a mop, squeegee or dry cloth before use. Protective clothing and adequate ventilation should be used when cleaning MARINEDECK®interior
