

PRESS RELEASE

MARINEDECK®

exterior

DURABLE MARINE FLOORS BY NATURE

MARINEDECK® exterior receives FSC certification.

On August 23rd 2010 Control Union in Zwolle in the Netherlands issued STAZO's MARINEDECK® exterior high performance cork composite decking their highest FSC certification - 100% from well managed forests. According to available information MARINEDECK® exterior is the only product in the world with such a certification for marine decks, except FSC certified ships decks of wood.

Such approval and certification proves that FSC certified products are manufactured in accordance to all strict environmental regulatory available, including integration of international governments related to the manufacturing and final use of natural products. All single parts of the production chain, incl. the final products, are certified. Certification proves that, especially 100% FSC certified products meet with the highest environmental requirements and standards of "the FSC Chain of Custody".

After an extended audit, executed by Control Union Certifications, that included warehousing, processing into semi manufactured products, the production of planks, sheet and the production of finished NC manufactured shipsdecks, also including administration and documentation, "the green light" for the highest grade of FSC certification on MARINEDECK® exterior was given

MARINEDECK® interior and STAZO® SecuTred were subject to a similar audit. Also both these products were FSC certificate rewarded.
